

Joint Management Catalog

We're Securos Surgical,
the standard for
customer experience.

Who is Securos Surgical?

Securos is an innovator of practical solutions for veterinary surgeons. We specialize in orthopedics, but further equip the surgical suite by offering quality daily-use items including surgical instruments and suture.

What makes us different? Why should you do business with us?

You can trust us for innovation, quality and value. And, as important as the products we bring to market, we deliver these products with the industry's most personalized service.

- Customer-focused in every aspect of what we do and every decision we make
- Problem-solving and inviting of collaboration with our customers to solve those problems
- Experts in our domain, but humble enough to constantly seek feedback
- Clear in our commitment to practical innovation, quality, value and service
- Rooted in the day-to-day reality of veterinary surgeons and general practitioners

Orthopedics

Developed from the insights of practicing veterinary surgeons.

Instruments

Performance you can feel the moment each instrument reaches your hand.

Sutures

Premium quality at price points that drive your success.

Stifle

Extracapsular Stabilization

Since the 1960s, Extracapsular Stabilization (ES) has been used to correct stifle instability due to cranial cruciate ligament rupture. ES combines synthetic materials with femoral and tibial fixation points to provide passive resistance to cranial tibial translation, internal rotation of the tibia, and hyperextension of the stifle joint such that long term stability and function can be accomplished through periarticular fibrosis.

SECUROS launched its repeatable, calibrated crimping system in 1999 and has continued to pioneer the ES procedure with the addition of Bone Anchors, Titanium Nitride Coated Crimp Clamps, OrthoFiber suture, and the PowerX Crimping Device. SECUROS is the name you trust for Extracapsular Stabilization.

Tibial Tuberosity Advancement

Tibial Tuberosity Advancement (TTA) was described for use in dogs in the 2000s. The premise of TTA is that an increase in the efficiency of the quadriceps mechanism will subsequently neutralize cranial tibiofemoral shear force in the cranial cruciate ligament deficient stifle. TTA involves an osteotomy of the cranial tibial tuberosity and perpendicular alignment of the patella ligament and common tangent of the femorotibial joint to eliminate cranial tibial thrust.

SECUROS offers an assortment of innovative implants and instruments for TTA including XGEN "forkless" TTA plates, Cut-to-Length TTA cages, PLX spacers, and Velocity Bioactive Synthetic Bone Graft product lines. Introduced in 2014 is an expanded line of "long" plates in Standard and XGEN designs as well as a full range of "half" cage sizes in Standard and Cut-to-Length designs.

Tibial Plateau Leveling Osteotomy

Tibial Plateau Leveling Osteotomy was introduced in the 1990s to address stifle instability due to cranial cruciate ligament

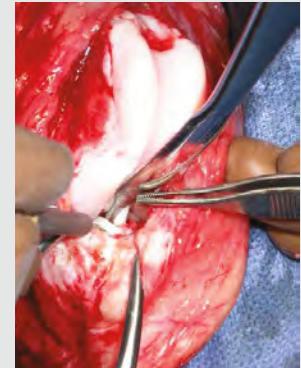

rupture. TPLO limits tibiofemoral shear force by decreasing the natural orientation of the tibial plateau, thereby eliminating cranial tibial thrust. This is achieved by creating a proximal tibial osteotomy and rotating the proximal segment to decrease the tibial plateau angle.

SECUROS first introduced its patented TPLO plate in 2003 and through the years has vastly expanded its product offering to include a full range of TPLO instrumentation and power equipment to provide the ultimate TPLO experience. In 2016, Securos introduced its patent pending

PAX TPLO Plate offering. The novel plate designs feature a proximocaudal curve to optimize plate alignment and screw purchase, crescent head to accommodate high tibial osteotomies, and anatomic precontour generated from 100+ canine patients.

Meniscal Management

Meniscal injury is often associated with cranial cruciate ligament rupture in dogs. It is theorized that meniscal injury is caused by excessive caudal sliding of the femoral condyle due to cranial cruciate ligament instability. Accurate assessment of the menisci is important for the proper surgical treatment of meniscal pathology in dogs.

SECUROS offers a wide array of instrumentation for proper diagnosis and treatment of meniscal injury including blade handle and blades, retractors, probes, hooks, forceps, and rongeurs.

Patellar Luxation

Luxation of the patella is one of the most common orthopedic conditions in dogs. The cause of patellar luxation is considered to be a consequence of a variety of skeletal abnormalities affecting the stifle. Several strategies may be required to correct patellar luxation including reconstruction of the patellar soft tissues, deepening of the femoral groove, transposition of the tibial crest, and correction of femoral deformity.

SECUROS features a comprehensive collection of pins, wires, instruments, and saws that provide flexibility and versatility in patellar luxation corrective surgical treatment.

Extracapsular Stabilization

PowerX Crimping System

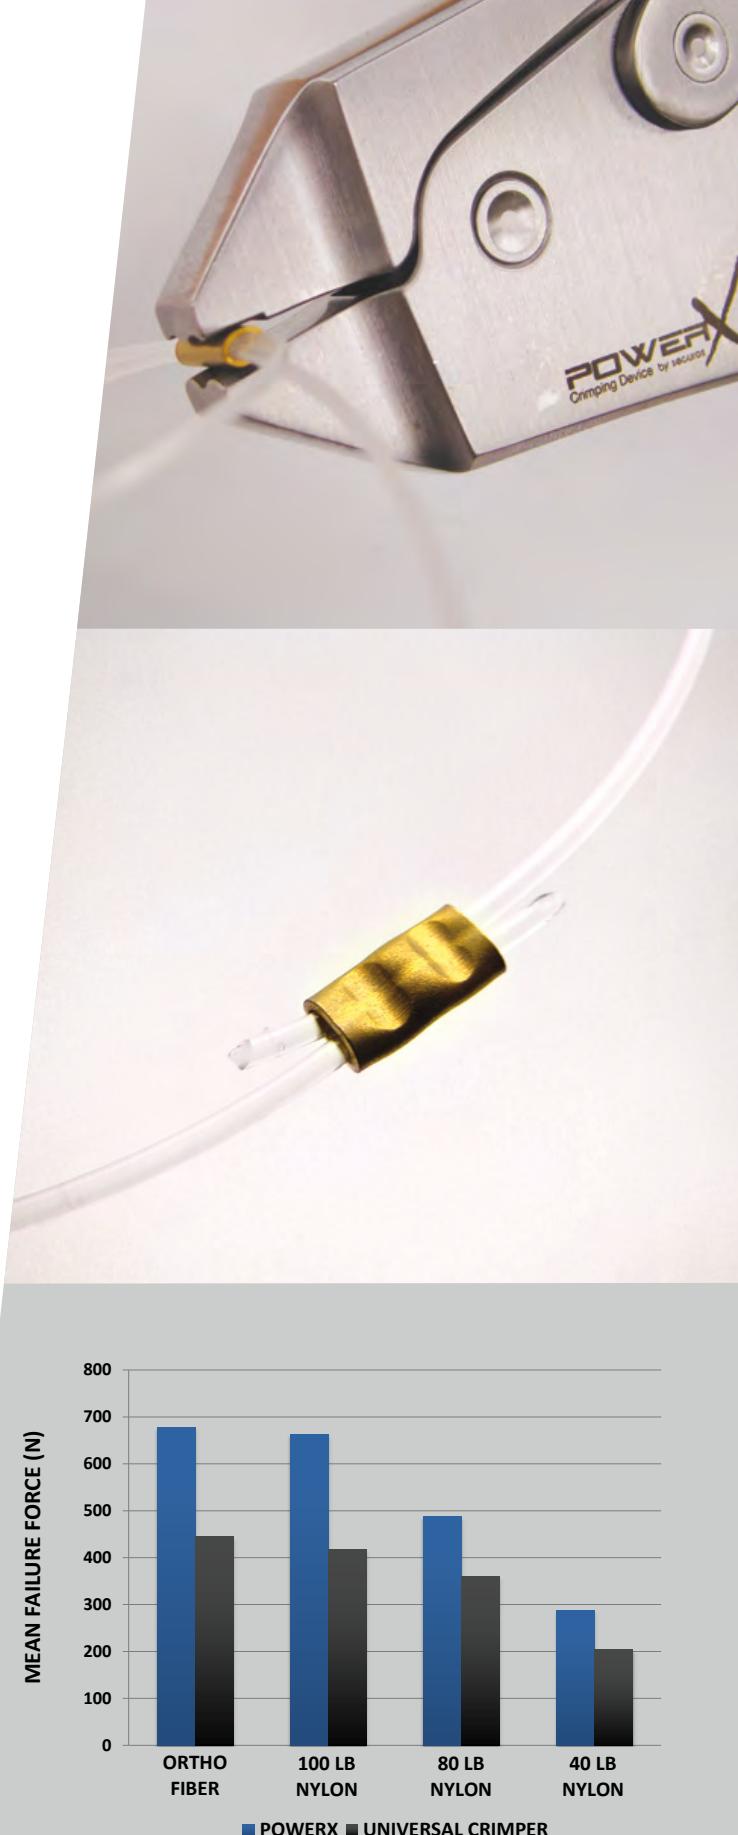

The PowerX Crimping Device is the 4th generation of Securos Surgical crimping devices and delivers several benefits over previous models:

- 50% increase in holding strength (as measured by ultimate tensile strength)
- 5X mechanical advantage due to multi-action design
- Compatible with monofilament nylon (40#, 80#, and 100#) and OrthoFiber sutures
- Precisely engineered wave pattern delivers three crimps at once
- Pat. No. 8,495,902

Medical Coated Crimp Clamps Improve Biocompatibility

Securos is the only veterinary orthopedic company to offer Titanium Nitride (TiN) coated crimp clamps. TiN is a high quality thin-film medical grade coating applied to the surface of the crimp clamp. Benefits of TiN include:

- Increased biocompatibility provided by a chemically inert TiN barrier on surface of implant
- Improved corrosion resistance of the 316LVM stainless steel implant and autoclave induced corrosion
- Improved wear resistance prevents material erosion in high wear areas

Generations

Since the introduction of the Crimping System in 1999, SECUROS has continued its commitment to innovation by optimizing the Crimping Device design through multiple generations. The PowerX Crimping Device is the 4th generation design, providing superior crimping benefits over previous models.

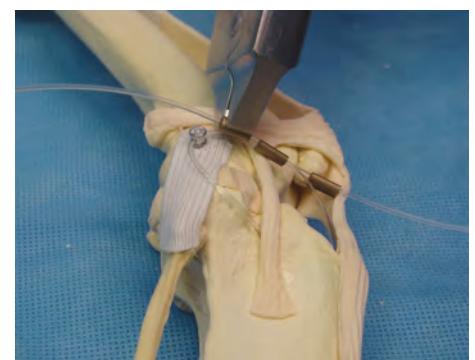

Step by Step Extracapsular Stabilization

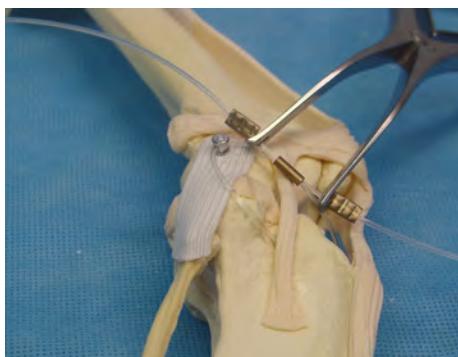

Step 1: Drill tibial tunnel centered in or near the muscular groove of the tibia. The tunnel should be placed as proximal as possible with caution taken to avoid entering the joint.

Step 2: For bone anchor technique, insert bone anchor in lateral femoral condyle and break away shaft. For fabella technique, use cruciate needle to pass suture around the fabella.

Step 3: Pass suture through bone anchor, tibial tunnel, and caudal to the patellar tendon. Loop suture through primary crimp clamp and place secondary crimp clamps on end strands. Center PowerX crimping device on secondary crimps and crimp down completely.

Step 4: Using tensioning device, apply tension to the suture loop. Test for tibial thrust and cranial drawer while tensioner holds the construct in place.

Step 5: Once the ideal amount of tension is applied and tibial thrust and cranial drawer is eliminated, center the PowerX crimping device on the primary crimp clamp and crimp down completely.

Step 6: Cut off the secondary crimp clamps, leaving the suture loop and only the primary crimp in the patient.

Suggested Kits

Basic 80lb PowerX Starter Kit:

- 037934 (1) PowerX Crimping Device
- 031037 (1) Universal Tensioning Device
- 029033 (1) 80# Nylon w/Sm Cruciate Needle
- 037937 (1) Crimp Clamp, TiN, 80#, 15pk
- 097795 (3) Small Sterilization Tray for Crimps
- 035251 (1) Cruciate Repair CD-ROM

Complete 80lb PowerX Starter Kit:

- 037934 (1) PowerX Crimping Device
- 031037 (1) Universal Tensioning Device
- 043935 (1) Cruciate Needle Holder, 7" TC
- 800053 (1) Crimp Clamp, TiN, 40#, 15pk
- 037937 (1) Crimp Clamp, TiN, 80#, 15pk
- 037938 (1) Crimp Clamp, TiN, 100#, 15pk
- 029035 (1) 40# Nylon w/Sm Cruciate Needle
- 029033 (1) 80# Nylon w/Sm Cruciate Needle
- 035879 (1) 100# Nylon w/Med Cruciate Needle
- 097795 (3) Small Sterilization Tray for Crimps
- 035251 (1) Cruciate Repair CD-ROM

OrthoFiber is a braided sterile surgical suture prepared from ultra-high molecular weight, long-chain linear polyethylene (UHMWPE) fibers. Its unique, inter-locking core technology provides a sturdy core within the center of the suture to act as a backbone for enhanced handling characteristics. Additional benefits of OrthoFiber include:

- Improved strength and superior fixation characteristics over monofilament
- Superior abrasion resistance when compared to polyester
- Excellent biocompatibility as measured and tested according to ISO 10993
- Available in a variety of pre-sterile suture pack configurations

Medical Coated Crimp Clamps Improve Biocompatibility

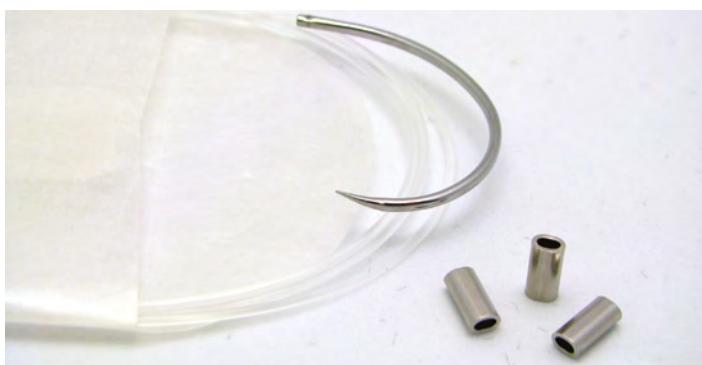

SECUROS is the only veterinary orthopedic company to offer Titanium Nitride (TiN) coated crimp clamps. TiN is a high quality thin-film medical grade coating applied to the surface of the crimp clamp. Benefits of TiN include:

- Increased biocompatibility provided by a chemically inert TiN barrier on surface of implant
- Improved corrosion resistance of the 316LVM stainless steel implant and autoclave induced corrosion
- Improved wear resistance prevents material erosion in high wear areas

| 035874 | 003526 | 4.5mm Bone Anchor | 19 | Green | 2-80#, 1-100#, 2-OrthoFiber | 3.2 |

Step by Step Bone Anchors

Step 1: Insert bone anchor using hand chuck or power drill.

Step 2: Bend shaft perpendicular to direction of bone anchor hole.

Step 3: Break away shaft, leaving threaded portion and eyelet in bone.

Instruments

Instruments for Extracapsular Stabilization

| PART# | SECUROS# | PRODUCT DESCRIPTION | LENGTH ("") |
|--------|----------|------------------------|-------------|
| 037934 | 004033 | PowerX Crimping Device | 8.75 |

PowerX Crimping System

The PowerX Crimping Device is the 4th generation of SECUROS crimping devices and provides several benefits over previous models:

- 50% increase in holding strength (as measured by ultimate tensile strength)¹
- 5X mechanical advantage due to multi-action design
- Compatible with monofilament nylon (40#, 80#, and 100#) and OrthoFiber sutures

¹ Maritato KC, Barnhart MD, Kazanovitz AJ, et al. In vitro mechanical evaluation and comparison of two crimping devices for securing monofilament nylon and multifilament polyethylene for use in extracapsular stabilization of the canine stifle. Vet Comp Orthop Traumatol 2012; 25.

Tibial Tuberosity Advancement

Xgen TTA System

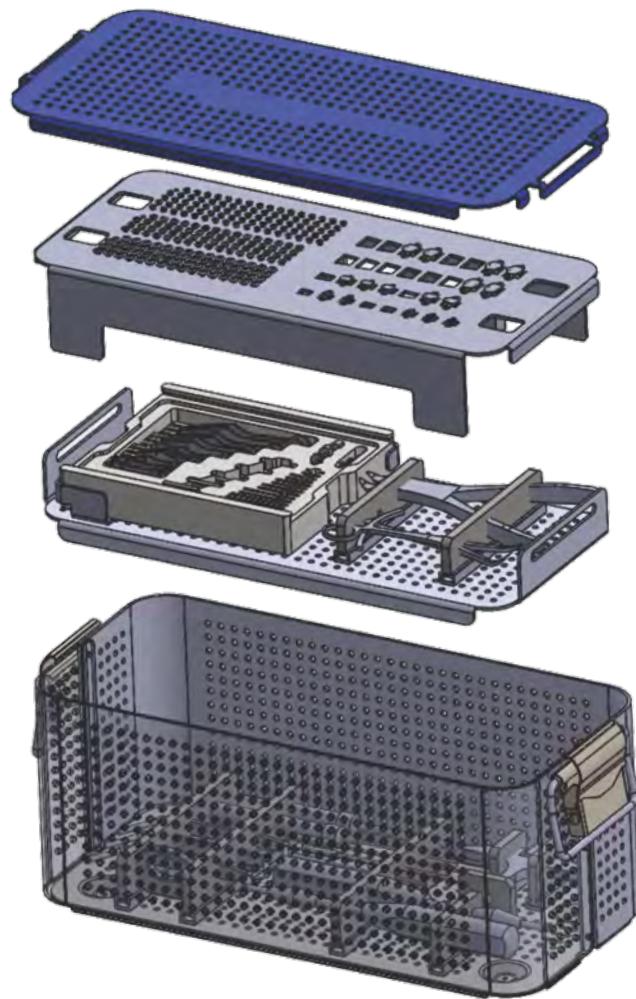

- No fork means greater versatility in contouring the plate - contouring does not affect screw placement!
- No hammering! Since no force is needed to seat the Xgen plate, there's no concern of separating the tuberosity prior to completing the cut.
- More flexibility in adjusting plate orientation (Xgen plate can pivot around top screw).
- Less holes in bone equal fewer stress risers.
- The Xgen plate hole spacing offers greater proximal/distal placement options on the tuberosity.
- No forks equal less inventory.
- Greater plate versatility intra-operatively.

Suggested Kits

XGEN TTA Kit:

- 031140 (1) TTA Plate Bender
- 031144 (1) TTA T-Handle
- 063300 (1) 3mm TTA (Handle) spacer
- 063301 (1) 6mm TTA (Handle) spacer
- 063302 (1) 9mm TTA (Handle) spacer
- 063303 (1) 12mm TTA (Handle) spacer
- 055050 (1) 1.8/2.4mm Double Drill Guide
- 031195 (1) 2.0/2.7mm Double Drill Guide
- 030996 (1) 2.5/3.5mm Double Drill Guide
- 029097 (1) 1.5/2.0/2.4mm Depth Gauge
- 029098 (1) 2.7/3.5/4.0mm Depth Gauge
- 035880 (1) Screwdriver shaft w/ Holding Sleeve for 2.4mm screws
- 029524 (1) Screwdriver w/ Holding Slv for 2.7, 3.5 & 4.0mm screws
- 042400 (1) Cage Cutter w/ TC Inserts
- 035878 (1) Bone Reduction Forceps, 5.5"
- 031139 (1) 1.8mm Jacobs Chuck Coupling Drill Bit (for 2.4 screws)
- 028995 (1) 2.0mm Jacobs Chuck Coupling Drill Bit (for 2.7 screws)
- 028996 (1) 2.5mm Jacobs Chuck Coupling Drill Bit (for 3.5 screws)
- 055165 (1) Cuttable TTA Cage, TI, 3mm x 19mm
- 055166 (1) Cuttable TTA Cage, TI, 4.5mm x 16mm
- 042341 (1) Cuttable TTA Cage, TI, 6mm x 22mm
- 042448 (1) Cuttable TTA Cage, TI, 7.5mm x 22mm
- 042345 (1) Cuttable TTA Cage, TI, 9mm x 25mm
- 042450 (1) Cuttable TTA Cage, TI, 10.5mm x 26mm
- 042347 (1) Cuttable TTA Cage, TI, 12mm x 28mm
- 055168 (1) Cuttable TTA Cage, TI, 15mm x 31mm
- 052718 (1) XGEN TI TTA Plate, 2-2 hole, 1.0mm Thick
- 042157 (1) XGEN TI TTA Plate, 3-2 hole, 1.0mm Thick
- 042158 (1) XGEN TI TTA Plate, 4-2 hole, 1.0mm Thick
- 035869 (1) XGEN TI TTA Plate, 5-2 hole, 1.0mm Thick
- 042159 (1) XGEN TI TTA Plate, 6-3 hole, 1.0mm Thick
- 042160 (1) XGEN TI TTA Plate, 7-3 hole, 1.0mm Thick
- 042161 (1) XGEN TI TTA Plate, 8-3 hole, 1.0mm Thick
- (4 each) 2.4 x 10-40mm TI, Self-Tapping, Hex head Screw
- (2 each) 2.7 x 14-26mm TI, Self-Tapping, Hex head Screw
- (2 each) 3.5 x 16-30mm TI, Self-Tapping, Hex head Screw
- 042430 (1) 2mm PLX Spacer Implant, TI
- 042432 (1) 4mm PLX Spacer Implant, TI
- 042434 (1) 6mm PLX Spacer Implant, TI
- 058884 (1) Screw Tray for 2.4, 2.7 and 3.5mm Screws
- 058885 (1) TTA Plate Tray, for XGEN or Forked, Long & Standard
- 058883 (1) TTA Cage Tray, for cuttable or standard
- 058886 (1) Full Tray Covers, set of 2
- 059041 (1) Half Tray Cover

Tibial Plateau Leveling Osteotomy

PAX Locking TPLO Plate System

- 2.0 / 2.4 / 2.7 / 3.5 mm TPLO Plates
- Polyaxial locking titanium alloy plates and screws for supreme biocompatibility
- Proximocaudal curve to optimize plate alignment and screw purchase
- Crescent head to accommodate high tibial osteotomies
- Anatomic precontour generated from 100-plus canine patients
- 32-month research and development initiative
- Autoclavable organizer tray for plates and forceps.

*Patent pending design

**See PAX Polyaxial Locking System in the
PAX Catalog for more detail.**

PAX Polyaxial Locking TPLO Plate

Features and Benefits

- Polyaxial locking titanium alloy plates and screws for supreme biocompatibility
- Proximocaudal curve to optimize plate alignment and screw purchase
- Crescent head to accommodate high tibial osteotomies
- Anatomic precontour generated from 100-plus canine patients
- 32-month research and development initiative
- Autoclavable organizer tray for plates and forceps

Securos TPLO (Non-Locking) Plate System

- Anatomically precontoured stainless steel TPLO Plate, featuring ceramic blasted anti-glare finish
- Variety of low profile plate sizes to fit varying patient anatomy
- Ergonomic pneumatic TPLO Saw does not require specialized blade adapter
- Multiple TPLO blade sizes and style, available for surgeon preference

Securos TPLO (Non-Locking) Suggested Kit:

042036 (1) TPLO Saw (Pneumatic)

042037 (1) TPLO Hose

042053 (1) 1/8" Hex Key

043932 (1) Castroviejo Caliper

056030 (1) TPLO Plate Benders
(Set of 2)

029098 (1) Depth Gauge, 2.7/3.5/4.0mm

031195 (1) 2.0/2.7mm Double Drill Guide

030996 (1) 2.5/3.5mm Double Drill Guide

029524 (1) 2.7/3.5/4.0mm Hex
Screwdriver, includes
holding sleeve

042437 (1) TPLO Jig

029057 (1) 1/16x9" Trocar/Trocar
Smooth Pin

031003 (1) 1/8x4.5" Trocar/Trocar
Smooth Pin

029061 (1) 1/8x9" Trocar/Trocar
Smooth Pin

036209 (1) 1/4" Side Pin Cutter
w/ Detachable Handles, 18.5"

042096 (1) 5/64" Side Angled Pin
Cutter, 7"

056009 (1) Screw Rack
(2.0/2.7/3.5/4.0mm)/
Storage Case 11x5.75"

TPLO Plates, Stainless Steel

The Patellar Luxation Saw Reinvented!

The PLX Saw is an innovative solution to the shortcomings of the traditional patella luxation saw used for deepening the trochlear wedge during patella luxation repair. The PLX saw features an ergonomic design that is fully autoclavable and easy to assemble, clean, and manipulate. Additional benefits include:

- Innovative locking design eliminates the need for screws and wrench
- Saw blade remains perfectly straight
- Blades available in 15mm and 25mm sizes
- Anodized Aluminum saw handle and Stainless Steel saw blades made in the USA

Hip

Coxofemoral Luxation Management

Dislocation of the hip joint results in displacement of the femoral head from the acetabulum, creating a disruption of the joint capsule and other local structures. Surgical reduction can be used to replace the hip and restore support structure when closed reduction is not successful.

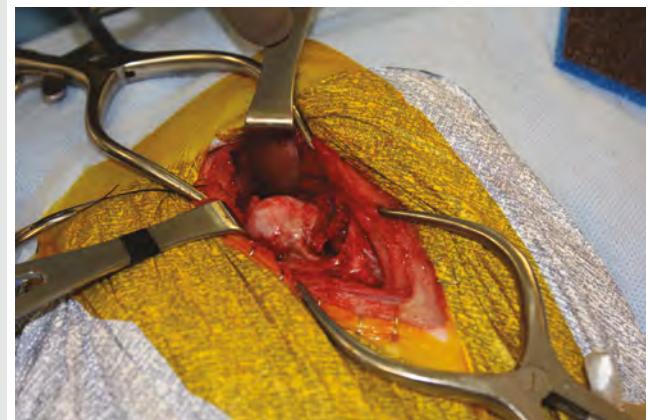

SECUROS offers a variety of implants and instrumentation to provide additional mechanical support to the hip joint during the healing phase. The SECUROS Coxofemoral Luxation Management (CLM) System was originally developed over a 2-year period with leading universities prior to production.

Radiographs provided by Veterinary Specialty Hospital - San Diego, CA

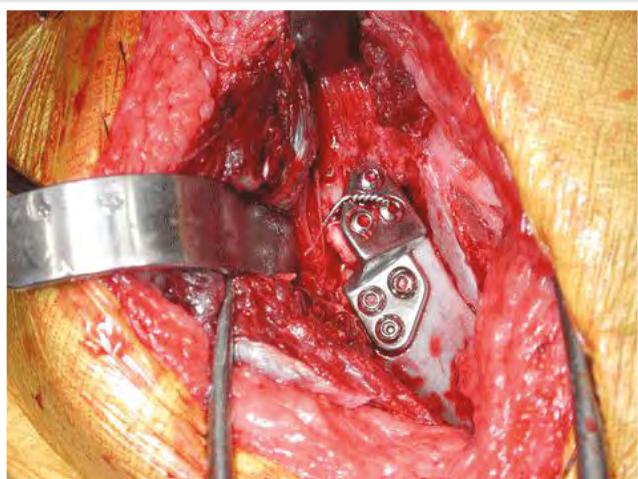

Femoral Head Osteotomy

When restoration of the hip is not feasible due to injury or poor hip conformation, a Femoral Head Osteotomy (FHO) is one surgical option. FHOs require the removal of the femoral head and neck to produce a false joint. Proper patient selection is critical to the success of FHOs.

SECUROS features a comprehensive collection of instrumentation for FHOs including retractors, bone holding forceps, bone reduction forceps, osteotomes, mallets, bone cutting forceps, rasps, rongeurs, and power equipment.

Pelvic Osteotomy

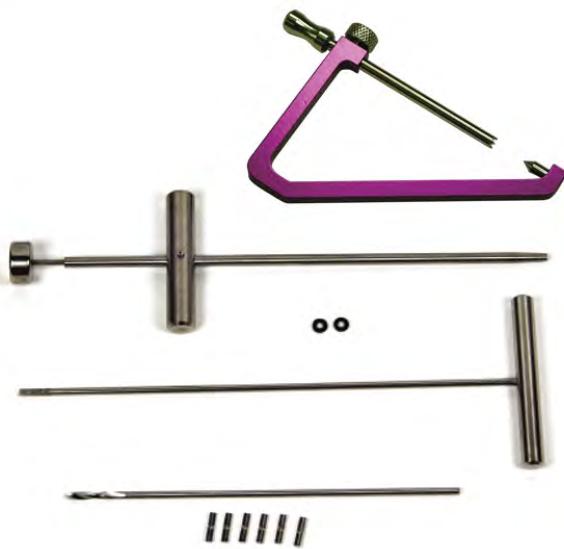

Canine Hip Dysplasia (CHD) typically results in hip joint instability or laxity. The long-term result to this joint laxity is progressive cartilage loss, scar tissue and/or osteophyte formation. Pelvic osteotomies are one surgical option for immature dogs with CHD. These procedures involve cutting the pelvis in two (DPO) or three (TPO) places and rotating the bone segments to increase the coverage of the femoral head by the acetabulum to decrease hip laxity.

SECUROS provides versatility to the surgeon by offering implants and instrumentation for both DPO and TPO procedures. Also available are PAX locking DPO and TPO plates in varying angles.

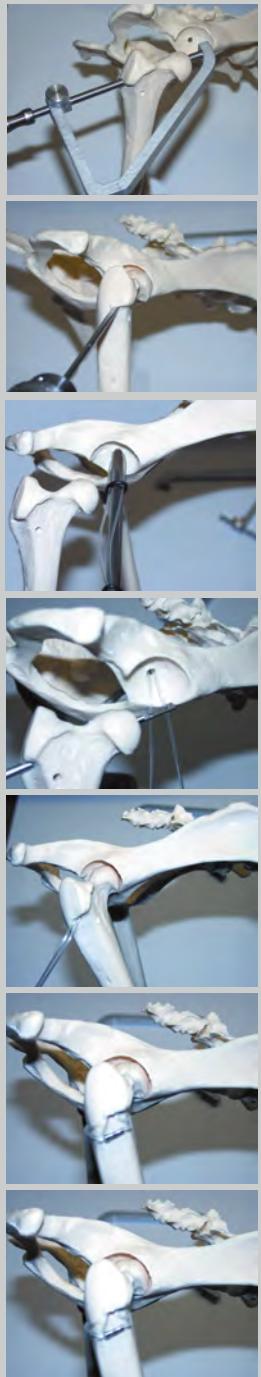

Securos Surgical Coxofemoral Luxation Management System

- Excellent alternative to a FHO for luxated hips.
- Toggle rods (pins) are made of the implant grade stainless steel.
- Tested and shown to be mechanically unrivaled.
- Aiming guide simplifies aiming and drilling of the femoral neck tunnel from the lateral side of the proximal femur.
- Insertion Device is used to place the toggle rod behind medial wall of the acetabulum.
- Suture puller is used to pull suture through drilled hole in femoral neck.
- The CLM System can be purchased as a kit or by independent components.

Coxofemoral Luxation Management Suggested Kit:

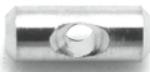

- 035930 (1) Femoral Head Aiming Guide
- 036053 (1) Toggle Rod (Pin) Insertion Device

Single Strand OrthoFiber Braided Polyethylene (Non-absorbable) Suture (Box of 12, 36" Length, Sterile)

OrthoFiber is a braided sterile surgical suture prepared from ultra-high molecular weight, long-chain linear polyethylene (UHMWPE) fibers. Its unique, inter-locking core technology provides a sturdy core within the center of the suture to act as a backbone for enhanced handling characteristics. Additional benefits of OrthoFiber include:

- Improved strength and superior fixation characteristics over monofilament
- Superior abrasion resistance when compared to polyester
- Excellent biocompatibility as measured and tested according to ISO 10993
- Available in a variety of pre-sterile suture pack configurations

*Please see PAX brochure for locking options.

*Non-Self-Tapping screws are available. Contact Securos.

Carpus and Tarsus

Arthrodesis

Arthrodesis is a term used to describe the artificial ossification of two (or more) adjacent bones by surgery. This is done in response to pain that cannot be effectively managed by medication or normally indicated treatments. By fusing the bones that make up the joint, the pain caused by the condition can be reduced or eliminated; and allow the patient sustain the function of the leg. Severe osteoarthritis, joint instability and certain fractures can lead to arthrodesis as a salvage procedure.

Carpal and hock joints are the two most commonly arthrodesed joints in veterinary medicine. Shoulders, stifle, elbow and digits can also be arthrodesed when indicated. Securos makes arthrodesis plates for carpal and pantarsal (hock) joints.

Arthrodesis Suggested Kit:

- 030971 (1) Double Drill Guide 1.1/1.5mm
- 030970 (1) Double Drill Guide 1.5/2.0mm
- 031195 (1) 2.0/2.7mm Double Drill Guide
- 030996 (1) 2.5/3.5mm Double Drill Guide
- 042238 (1) 2.7mm Compressional Drill Guide
- 029018 (1) 3.5mm Compressional Drill Guide
- 029097 (1) Depth Gauge 1.5/2.0mm
- 029098 (1) Depth Gauge for 2.7-4.0mm screws
- 042253 (2) Bending Iron 1.5/2.0mm
- 029100 (1) Left Bending Iron (2.4/2.7/3.5mm Plates)
- 029101 (1) Right Bending Iron (2.4/2.7/3.5mm Plates)
- 042292 (1) Screwdriver w/ Holding Sleeve, 1.5/2.0/2.4mm Hex
- 029524 (1) Screwdriver for 2.7, 3.5 & 4.0mm Hex Screws, w/sleeve
- 035878 (2) Bone Reduction Forcep, 5.5" Ratchet Style
- 045001 (1) Bone Reduction Forceps, 8" Ratchet Style
- 049947 (1) Verbrugge Bone Holding Forceps, 6", Curved/Speedlock
- 056017 (1) Small Red Fragment Case
- 045549 (1) Mini Screw Rack, for 1.5 and 2.0mm screws
- 056009 (1) Screw Tray 2.0/2.7/3.5mm (with own case)
- 028993 (1) 1.1mm Drill Bit Jacobs Chuck
- 028994 (1) 1.5mm Drill Bit Jacobs Chuck
- 028995 (1) 2.0mm Drill Bit Jacobs Chuck
- 028996 (1) 2.5mm Drill Bit, Jacobs Chuck
- 028997 (1) 2.7mm Drill Bit, Jacobs Chuck
- 029005 (1) 3.5mm Drill Bit, Jacobs Chuck
- (4 each) 1.5x6-20mm SS Hex Screw
- (4 each) 2.0x6-20mm SS Hex Screw
- (4 each) 2.7x10-40mm SS Hex Head Screw
- (4 each) 3.5x10-40mm SS Hex Head Screw
- 042225 (1) 1.5/2.0mm Pancarpal Arthrodesis Plate, Compressional, 9 hole
- 042226 (1) 2.0/2.7mm Pancarpal Arthrodesis Plate, Compressional, 9 hole
- 029117 (1) 2.7/3.5mm Pancarpal Arthrodesis Plate, Compressional, 9 hole
- 044618 (1) 2.0/1.5mm Pantarsal Arthrodesis Plate, L medial, R lateral, 9 hole
- 055046 (1) 2.0/1.5mm Pantarsal Arthrodesis Plate, R medial, L lateral, 9 hole
- 044619 (1) 2.7/2.0mm Pantarsal Arthrodesis Plate, L medial, R lateral, 9 hole
- 044620 (1) 2.7/2.0mm Pantarsal Arthrodesis Plate, R medial, L lateral, 9 hole
- 044621 (1) 3.5/2.7mm Pantarsal Arthrodesis Plate, L medial, R lateral, 9 hole
- 042051 (1) 3.5/2.7mm Pantarsal Arthrodesis Plate, R medial, L lateral, 9 hole

| 390163 | 003549 | Conical Extraction Screws for 2.7mm & 3.5mm Screws |
| 048255 | 003561 | Conical Extraction Screws for Large Screws and 4.9mm Bolts |

■ special order item

Biomaterials

Bioactive Synthetic Bone Graft

Benefits

- Osteostimulative – active stimulation of osteoblast activity
 - Accelerates the natural healing process so that bone regeneration is fast and reliable
- Produces a thick bonding gel layer, minimizing stress between implant and tissue
- Accelerated bone growth 3X more than HA
- Acts as a basic buffer to neutralize pH in surrounding tissues

Composition

- 100% synthetic bioactive material
- Composed from elements that occur naturally in the body
 - Si** (Silicon) Aids in bone mineralization
 - O** (Oxygen) Most prevalent element in body (65% by weight); required for multiple functions
 - Ca** (Calcium) Component of bone mineral phase; most prevalent mineral in body, required for multiple body functions
 - Na** (Sodium) Required for normal cell function
 - P** (Phosphorus) Second most prevalent mineral in body; component of bone and DNA

How it works

- Provides a scaffold for new bone to grow in contact with the material
- Immediate release of ions creates an ideal environment for cellular attachment and for protein and growth factor absorption
- Accelerates the production of an increased number of cells capable of dividing and forming new bone and healing tissue

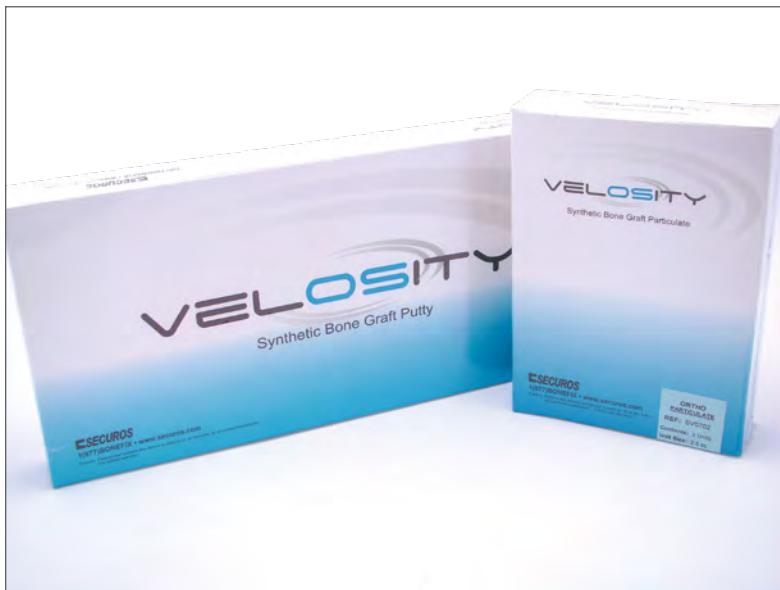

Velocity Synthetic Bone Graft Product Offering

- Velocity particulate
 - 2.5cc (2 per box), 7.0cc (1 per box)
 - Mix with saline, blood, or bone chips
- Velocity putty
 - 1.0cc (1 per box), 2.5cc (1 per box), 5.0cc (1 per box), 10.0cc (1 per box)

Applications

- Nonstructural orthopedic osseous defects
- Long bone acute fractures
- Bony defects
- Impaction grafting – hip revision
- Dental

Orthopedic Bioactive Synthetic Bone Graft (Sterile)

Putty Rolled in Hand

Applied to Bone

| PART# | SECUROS# | PRODUCT DESCRIPTION | VOLUME/BOX |
|--------|----------|---------------------|------------|
| 035245 | 003756 | Putty | 2.5cc |
| 032391 | 000842 | Putty | 5.0cc |
| 061464 | SV0610 | Putty | 10.0cc |
| 032390 | 000841 | Particulate | Two 2.5cc |
| 061463 | SV0707 | Particulate | 7.0cc |

Dental Bioactive Synthetic Bone Graft (Sterile)

Particulate

| PART# | SECUROS# | PRODUCT DESCRIPTION | VOLUME/BOX |
|--------|----------|---------------------|------------|
| 042333 | 003623 | Putty | 1.0cc |
| 032389 | 000840 | Particulate | Two 2.5cc |

Veterinary Bone Cement

Composition

- Comprised solely of Plexiglas (polymethyl methacrylate or PMMA)
- Acrylic compounds obtained by mixture of a liquid monomer and polymer in powder
- Polymerization activator produces an exothermic reaction, leading to the development of a consistent dough
- Provided as two-component materials, powder or liquid

Cement Mixing

- Temperature in operating room should not exceed 23° C (73° F)
- Cement should be stored for at least 2 hours at 23° C (73° F) prior to use
- If temperature is higher, cement handling and setting times get shorter. The opposite occurs at lower temperatures.
- Always mix cement smoothly without lifting spatula from the bottom of the bowl to avoid entrapment of air bubbles
- Hardening time is 8 to 9 minutes

Veterinary Bone Cement with Gentamicin

- Recommended in the prevention of postoperative infections
- Easily blended into cement
- Does not degrade during polymerization process
- Antibiotic release ranges from 2 weeks to over 5 years, with a maximum efficiency during the first 15 days
- The antibiotic concentration does not alter the mechanical properties of the cement

Securos Veterinary Bone Cement Product Offering

- 20g packets of ETO sterilized radiopaque power & an ampoule with 10ml ultrafiltration sterilized liquid
- 20g packets of ETO sterilized radiopaque power with 1.25% gentamicin & an ampoule with 10ml ultrafiltration sterilized liquid
- Specially coated cement mixing bowl to avoid cement adherence

Applications

- Total Joint Replacement
- Fracture Fixation
- Cranioplasty
